第三章

MapReduce 框架原理

KeyValueTextInputFormat

KeyValueTextInputFormat

- 每一行均为一条记录，被分隔符分割为key、value;
- 可以通过在驱动类中设置
`conf.set(KeyValueLineRecord.KEY_VALUE_SEPERATOR, "\t");`
来设置分隔符;
- 默认分隔符是tab(\t).

示例

->: 表示水平方向的制表符

line1 ->Rich learning form

line2 ->Intelligent learning engine

line3 ->Learning more convenient

line4 ->From the real demand for more close to the
enterprise

每条记录表示为以下键/值对

(line1, Rich learning form)

(line2, Intelligent learning engine)

(line3, Learning more convenient)

(line4, From the real demand for more close to the enterprise)
